FOURGEE · SDC HACKATHON 2026

Oroboros

Consume. Regrow. Plan.

A career what-if engine for a changing world of work.

Universiti Teknologi MARA

Domain 1 · Future-Ready Workforce

The reskilling problem

Meet Hui Min.

A claims processor facing an AI triage pilot.

Which parts of her work should she build on?

Synthetic persona—not a real user testimonial.

3
months to adapt

6
hours/week to learn

RM 0 training budget

The task-first approach

EXPLORE CHANGE

Consume

See task exposure under different AI scenarios.

FIND DIRECTION

Regrow

Match transferable work to real occupations.

TAKE ACTION

Plan

Learn with free courses and proof tasks.

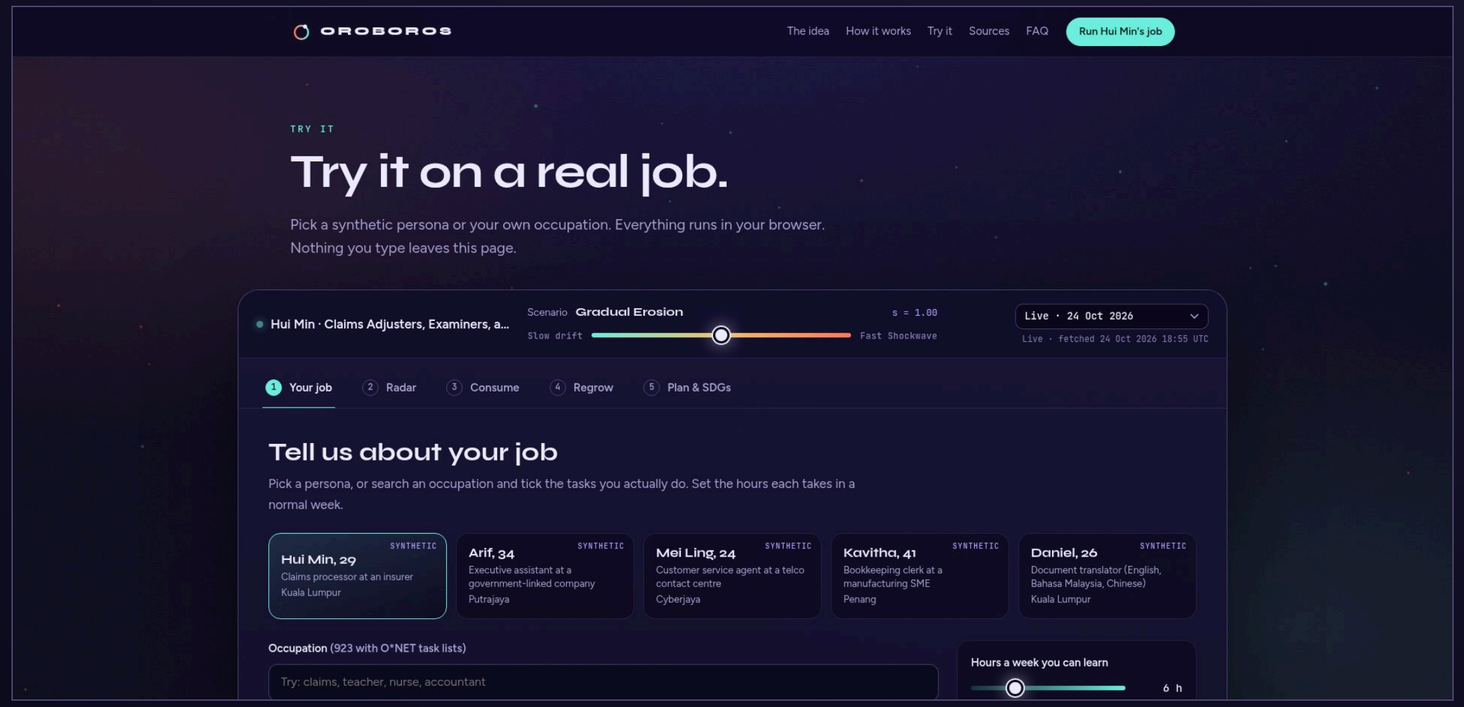

The starting point

PROTOTYPE DEMO

Your work.
Your week.

Choose a persona, select real tasks, then set hours.

Open live prototype ↗

Actual prototype · synthetic persona selected

The scenario comparison

Published exposure × momentum × scenario speed

0.6	1.0	1.6
Slow drift	**Gradual**	**Shockwave**

Scenario multipliers—not forecasts.

Show ranges. Keep uncertainty visible.

The next practical step

REGROW

Fit × Resilience

Real occupations, visible task overlap, explicit skill gaps.

PLAN

A course.
A proof task.
A weekly pace.

Explore SDG priorities. Export the plan.

The technical approach

Public sources

O*NET, exposure research, activity feeds

→

Data pipeline

Python + DuckDB → dated JSON

→

Browser engine

JavaScript scoring on GitHub Pages

Core runs without an LLM. Optional Qwen integration is not connected.

US-based data and scenario assumptions need local validation.

The impact framework

SDG TARGET

4.4

Relevant skills for employment and decent work.

PHASE 2 TARGETS · NOT ACHIEVED RESULTS

80% reach a plan in ≤5 minutes

70% identify a concrete next course

100% recommendation source coverage

Proposed pilot: at least 10 participants.

UN SDG 4.4 ↗

FOURGEE · UNIVERSITI TEKNOLOGI MARA

Consume. Regrow. Plan.

Next: real-user testing and Malaysian-context validation.
